

PROFILE SUMMARY

MCA graduate specializing in Full-Stack Development with hands-on experience in the MERN stack (MongoDB, Express.js, React.js, Node.js). Strong foundation in Data Structures & Algorithms using C++. Skilled in building scalable web applications, RESTful APIs, and responsive user interfaces. Focused on writing clean, efficient code and solving real-world problems through practical projects.

EDUCATION

Master of Computer Application	2024 – 2026
Allenhouse Institute of Technology, Kanpur	
Bachelor of Computer Application	2020 – 2023
Dr. Virendra Swaroop Institute of Computer Studies, Kanpur	

SKILLS

Programming Languages: C, C++, JavaScript, Python
Frontend: HTML, CSS, Tailwind CSS, JavaScript (ES6+), React.js, Responsive Design, Zustand, Next.js
Backend & Database: Node.js, Express.js, TypeScript, RESTful APIs, Authentication (JWT), Authorization, MongoDB, Redis, Rate Limiting
Tools & Platforms: Git, GitHub, Vite, Render, Vercel, Postman
Concepts: Data Structures & Algorithms, API Integration, State Management, CRUD Operations

PROJECTS

- Career Pilot – AI-Powered Resume & Placement Tracker

[Live Link](#)

 - Built a full-stack placement preparation platform with **8 integrated modules** including ATS resume analysis, job matching, application tracking, and leaderboard ranking for **6+ users**
 - Developed an ATS scoring engine using keyword extraction and rule-based skill matching across **7+ skill categories**, detecting matched/missing keywords with **74.5% score accuracy**.
 - Implemented JWT authentication, RESTful APIs for resume upload, and text extraction from PDF/DOC/DOCX using pdfjs-dist, Mammoth, and JSZip.
- Secure Authentication REST API — Node.js, Express, Redis, MongoDB

[GitHub](#)

 - Engineered a secure, scalable REST API implementing JWT-based authentication with Access Token and Refresh Token rotation, ensuring seamless session management.
 - Implemented Redis-based token blacklisting mechanism for instant session invalidation on logout, preventing unauthorized access post-logout.
 - Designed and integrated a Sliding Window Rate Limiting algorithm using Redis Sorted Sets, mitigating brute force and **DDoS** attacks by restricting requests to **5 per 60 seconds per IP**.
 - Developed secure middleware pipeline for route protection using JWT verification, cookie-based HTTP Only token storage, and automated token refresh on expiry.
 - Utilized bcrypt for password hashing with salt rounds, ensuring industry-standard credential security.
- Bookstore – Full Stack MERN Application

[Live Link](#)

 - Developed a full-stack bookstore application using MERN stack, enabling users to perform CRUD operations on **500+ book records**.
 - Implemented secure user authentication and authorization using JWT-based login system.
 - Designed RESTful APIs to handle book management and user operations, improving backend efficiency.
 - Built a responsive UI using React with reusable components and optimized state management.
